DETAILED ACTION

Claim Objections

1. Claims 4, 5, and 18-20 are objected to because of the following informalities:

Regarding claim 4, this claim depends on itself.

Regarding claim 5, this claim depends on itself.

Regarding claim 18, the phrase “ the executable program instructions comprising program instructions for:” is unacceptable because “the executable program” executed by whom. Therefore, this phrase should be rewritten as “the executable program instructions executed by a route processor, comprising:”

Claims 19 and 20 are objected because they depend on the objected claim.

Allowable Subject Matter

2. Claims 1-20 would be allowable if rewritten to overcome the objection(s) under 35 informalities, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

3. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 1-5, prior arts do not disclose a Graceful Shutdown Notification message created by the processing element and sent to routing protocol peers to announce an intention of the intermediate node to be gracefully removed from service, the Graceful Shutdown Notification message further indicating that the intermediate node is able to continue forwarding packets over the network for a grace period, thereby allowing backup paths to be propagated to each peer and put into service prior to a final withdrawal of routes advertised by the intermediate node.

Art Unit: 2616

Regarding claims 6-14, the prior arts do not disclose modifying a routing protocol executing on the router to enable the router to announce to its peers in the network its intention to be gracefully removed from service.

Regarding claims 15-17, the prior arts do not disclose means for modifying a routing protocol executing on the router to enable the router to announce to its peers in the network its intention to be gracefully removed from service.

Regarding claims 18-20, the prior arts do not disclose modifying a routing protocol executing on the router to enable the router to announce to its peers in the network its intention to be gracefully removed from service.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(1) US 2006/0045004 (Charzinski et al) discloses method for diverting data packets when local link failures are identified.

(2) US 2005/0147051 (Suri) discloses detection of forwarding problems for external prefixes.
